### Exercise 3

- Which pages in your Final Project will include pagination features? Why these? Why not others?

**Ans:** My project is about renting cars from the school, and the school can track the vehicle they rent. The entity I will use pagination is driver and car. The reason is that there will be many people who will rent the vehicle. For the car, the school will support different types of vehicles and other models of cars, so it also needs to include pagination features.

- How many test instances will you need to create in order to test the pagination features?

**Ans:** I plan to create four pages, and each page has ten instances. I think it is a good enough instance to test the pagination features.

- Where will you get or how will you generate the test data values?

**Ans:** I will search online for different universities that are renting the car to their employee or student and copy the information I need from them. Also, I take a project is about the university track drivers who rent their cars. Therefore, I think I can get useful data value from it.

- How could you adapt the data migration code used in the first part of this assignment to load test data values of your own?

**Ans:** I will follow the instructions which the tutorial video to update my code. I will understand the code which the professor gave to us and try to use those functions in my own project.
